Experience

Developer Associate (Intelligent Product Recommendation), SAP – Bangalore Jun 2024 – Present

- Implemented secure cross-platform back-end services using **certificate-based(mTLS) authentication.**
- Built a **multi-target regression model** for intelligent product configuration using TensorFlow and Python.
- Developed a **graphical price estimate dashboard** with SAP UI5 for enhanced user interaction..
- Addressed high-priority security issues and obtained compliance approval for **AI-based services.**
- Implemented a **secure LLM orchestration service** with data masking to prevent personal data exposure during document processing.
- Delivered **Retrieval-Augmented Generation (RAG)** use cases using Python, SAP AI Core, Agentic AI and HANA Vector DB.
- Led **customer workshops** to identify use cases, designed and developed corresponding back-end services using **Java Cloud Application Programming**, and showcased implemented business solutions through live demos.
- Implemented **Agentic AI Reflection Design Pattern using autogen** in co-innovation with Micorsoft that reduced the time taken in tender analysis from weeks to hours.
- Implemented **metering and token consumption mechanisms**, along with **robust error handling and validation workflows** to ensure reliable and efficient agentic communication.

Scholar (Developer in JIT Team), SAP – Bangalore Sep 2023 – Apr 2024

- Developed **ABAP reports, BOPF objects**, and performed archiving tasks.
- Shifted focus to **SAP UI5, building a POC** to dynamically render table headers and buttons based on user needs.
- Created a complete **OData V4 mock server** to simulate service interactions.

DevOps Trainee, Nagarro – Remote Mar 2023 – Jul 2023

- Built and maintained CI/CD pipelines using **Jenkins, Ansible, Terraform, Docker, and Kubernetes** on AWS.
- Gained hands-on experience in modern DevOps practices, including cloud deployments and IaC.

Projects

DANA Tool (**Github**) Python, Ollama, NodeJs, ReactJs, MongoDB

- Built an AI-powered platform with **Agentic AI automation**, real-time monitoring, and low-code pipeline setup.
- Unified DevOps dashboard with Jenkins, GitHub, and SonarQube integration, creating **Github issues by analyzing PR, and generating build scripts directly.**

Smart House Device Management System (Github) NodeJs, ReactJs, MongoDB

- Developed a reusable **Smart House Device Management service** that integrates with any firmware via APIs.
- Device analytics, maintenance, and tracking of carbon footprint **within a microservice architecture with an API Gateway.**

MailAutomate (Github) Django,Python,SMTP

- Automated bulk sending of customized emails with attachments.

Education

BITS Pilani, M.Tech in Software Engineering **CGPA: 7.93** Aug 2023 – Jul 2025

Achievements

- Developed a project "**Code Generation for MDO**" in Innvent for Scholar and secured 3rd position in it.
- AI Programming with Python Nanodegree by AWS and Udacity.
- Amazon ML Summer School 2022.
